

Dimitrios Athanasiou

Dimitrios Athanasiou is a senior research scientist at the Center for Human Genome Research, National Institutes of Health. He is currently leading a team of researchers in the area of gene therapy for the treatment of Duchenne's Muscular Dystrophy (DMD). His research focuses on the development of novel gene therapy vectors and the optimization of gene delivery methods. He has published numerous papers in the field of gene therapy and has been involved in several clinical trials. He is also a member of the European Association of Human Gene Therapists (EURORDIS) and the European Union of Muscular Dystrophy (EUPATI).
