

# Webinar: Strengthening patient involvement in Health Technology Assessment (HTA)

***Note:** This webinar took place on Monday 28 September 2015. You can find a video recording and the presentation used during the webinar below.*

## Webinar introduction

HTA is a multidisciplinary process that examines the information about medical, cost-effectiveness, social, political, legal and ethical considerations of the application of a health technology – usually a medicine, medical device or clinical/surgical procedure. The main purpose of conducting an assessment is to inform policy decision making, which has an impact on patients and their ecosystem of health, including physicians and payers.

The webinar will examine the need for patient involvement in HTA and look at the HTA landscape in Europe. A patient organisation representative will present a case study on patient participation in HTA, and the conversation will also look at how the EUPATI toolkit can help informed patients engage in HTA.

## Webinar agenda

Time	Agenda
17.00	Welcome and introductions <b>Daphnee Pushparajah, UCB</b>
17.10	“HTA Introduction?” <b>Karen Facey, Coordinator – HTAi Patient Involvement Methods and Impact Working Group</b>
