

# Patients Involved | Case Report

## HIV patients actively involved in multiple phases

A case report on patients recruited by Janssen R&D in a program constructed for the EATG members. Afterwards, the course was handed over for further capacity building within their organisation without further company involvement.

Patient were involved as follows:

- Protocol design and review.
- Informed Consent Form (ICF) review.
- Participation in Drug Safety Monitoring Board (DSMB).

- Participation in Investigator Meeting.
- Building capacity in the area of Health Economics.

Janssen initiated also a collaboration with the London School of Economics and a tailor-made educational program was constructed for the EATG members. Afterwards, the course was handed over for further capacity building within their organization without further company involvement.

## Who was involved?

Janssen, EATG, ELPA, Treatment Action Group

## Level of patient expertise

- Patients with personal disease experience.
- Expert patient/patient advocates with good expertise on disease, but little R&D experience.
- Expert patient/patient advocates with good expertise on disease and good R&D experience.

## Benefits

Thanks to this collaboration we obtained:

- More targeted development.
- Better understanding of real needs for research and development.

- Faster study enrolment.
- Closer contacts between R&D experts and beneficiaries (motivational benefit).
- Better outcomes for patients.

## Challenges

In disease areas outside HIV, professors and experts not always in favour of having patients on board.

We have discussed with them and showed EATG success example as model.

## Learnings

- Need to structure the process to ensure continuing process beyond individuals.
- Patient literacy needs to be ensured to optimise feedback.
- Ability to replicate this collaboration across more patient groups and advocates to increase knowledge on different topics, amongst other, Health Economics.
